Department of Electrical and Electronics Engineering

All Subjects Course Outcomes (COs)

R20 Regulations

COURSE	COURSE	CO	COURSE OUTCOMES
TITLE	CODE	NO	
ALGEBRA	20MA1001	CO 1	Solve the system of Linear Equations
AND CALCULUS		CO 2	Solve first order differential equations utilizing the standard techniques for separable, exact, linear, homogeneous, orBernoulli cases
		CO 3	Obtain the complete solution of a higher order differential equations
		CO 4	Make use of the Taylor's and Maclaurin's Series and Maxima, Minima for the given function
		CO 5	Apply a range of techniques for solutions of first order Linearand non linear Partial Differential Equations (PDE)
		CO6	Apply the techniques of Multiple integrals for the Area of the region bounded by curves and volume.
APPLIED PHYSICS	20PH1001	CO 1	Explain optical phenomenon i.e. interference, diffraction using Huygen's wavetheory.
		CO 2	Comprehend and explain the concepts of matter waves, wave functions and its interpretation to understand the matter at atomic scale.
		CO 3	Comprehend Free electron theories on metals and apply them to learn the dynamics of free electrons in metals
		CO 4	Computercarrier concentration in semiconductors and to understand carrier transport mechanism in semiconductors
		CO 5	Understand the concepts of superconductors and nano materials to familiarize their applications in relevant fields.
		CO 6	Realize importance of LASERs in Engineering and Medical applications.
PROBLEM SOLVING AND	20ES1001	CO 1	Identify methods to solve a problem through computer programming.
PROGRAMMI		CO 2	Understand the use of basic elements of C language
NG		CO 3	Understand the difference and the usage of various control statement
		CO 4	Apply the modular approach for solving the problems
		CO 5	Apply the Arrays and Pointers for solving problems
		CO 6	Explain User-Defined Data Types and Files

ENGLISH	20EN1001	CO 1	Acquire in depth knowledge on formulating appropriate sentences withgrammatical accuracy and vocabulary building
		CO 2	Understand the factors that influence in use of grammar and learn to usesentences unambiguously
		CO 3	Impart effective strategies for professional written communication using devices of coherence & cohesion with adequate support & detail
		CO 4	Provide knowledge of use of phrases & clauses and improve effective writingNote making & Paraphrasing
		CO 5	Understanding the grammar rules for synthesis of sentences and use prewriting strategies to plan to write dialogues, reviews and edit the text effectively
		CO 6	Master the skills and sub skills of reading and use strategies for reading effectively andprovide knowledge on the structure and format of technical writing
Applied Physics lab	20PH1501	CO 1	learn important concepts of physics through involvement in the experiments by applying theoretical knowledge
		CO 2	understand the concepts of interference and diffraction and their applications
		CO 3	recognize the applications of laser in finding the wavelength, slit width and itsrole in diffraction studies
		CO 4	understand the important parameters of optical fibres and metals
ELECTRICAL ENGINEERIN G	20ES1501	CO 1	Demonstrate knowledge on different tools, abbreviations and symbols used inElectrical Engineering
WORKSHOP		CO 2	Measure different electrical quantities using measuring instruments
		CO 3	Explain how to trouble shoot the electrical equipments (like fan, grinder, motor,etc.)
		CO 4	Understand about wiring and earthing for residential houses
ENGINEERIN G & ITWORK	20ES1505	CO 1	Understand the safety aspects in using the tools and equipments
SHOP PART – A		CO 2	Apply tools for making models in respective trades of engineering workshop
ENGINEERIN G WORK		CO 4	Applybasicelectricalengineeringknowledgetomakesimple housewiringcircuits and checktheir functionality
SHOP		CO 4	Understand to disassemble and assemble a Personal Computer and preparethe computer ready to use
PART-B	20ES1505	CO 5	Apply knowledge to Interconnect two or more computers for informationsharing Understand functionalities of a computer and operating
1 ANI-D	20E31303		Onderstand functionalfules of a computer and operating

IT			system
WORKSHOP		CO 2	Practice Word processors, Presentation and
LAB			Spreadsheet tool
LIND		CO 3	Connect computer using wired and wireless
		COS	connections.
Problem	20ES1506	CO 1	Translate algorithms into programs (In C language)
Solving and	20151500		
Programming		CO 2	Code and debug programs in C program language using
Lab			various constructs
Lau		CO 3	Solve the problems and implement algorithms in C.
		CO 4	Make use of different data types to handle the real time
			data
ENGLISH	20EN1501	CO 1	Understand how speech sounds are used to create
LANGUAGE	20111301		meaning. Apply their knowledgeof English phonetics
LAB			and phonology to improve their own pronunciation
		CO 2	Recognize and use pitch patterns to signal complete
			and incomplete thoughtgroups and Speak confidently
			and intelligibly within groups and before an
			and intelligibly within groups and before an
		CO 3	Discuss and respond to content of a lecture or listening
		CO 3	passage orally and/or inwriting and make inferences and
			predictions about spoken discourse
		CO 4	Produce coherent and unified paragraphs with adequate
		CO 4	support and detail and canwrite a paragraph with a
			topic sentence, support, and concluding sentence
		CO 5	To help the students to cultivate the habit of reading
			passages for competitive exams such as GRE, TOEFL,
			GMAT etc
		CO 6	Learn, practice and acquire the skills necessary to
			deliver effective, presentation with clarity and enable
			them to prepare resume with cover letter.
VECTOR	20MA1003	CO 1	Utilize different operators such as gradient, curl and
CALCULUS,			divergence find the function
COMPLEX		CO 2	Evaluate area and volumes by fundamental theorems
VARIABLES &			of vector integration
TRANSFORM		CO 3	Apply the complex functions, Cauchy's integral
S (VC-CV&TS)			Theorem to find the integral values
		CO 4	Solve the differential equation by using Laplace
			transforms and its techniques
		CO 5	Apply the Inverse Laplace transforms techniques to
			covert into time Domaine
		CO6	Find the Fourier Series and Fourier Transform for
			the given functions
CHEMISTRY	20CH1001	CO 1	Understand the fundamental concepts of chemistry to
(COMMON TO			predict the structure andbonding of materials

EGE PEE 0 GG	1	00.0	T C (1 1 1 1 1 (' 1' 1 C 1 (
ECE,EEE&CS		CO 2	E .
E)		~~	chemical cells
		CO 3	Describe various energy storage devices and emerging
			technologies
		CO 4	Understand the mechanism and applications of different
			polymers in electronic
			devices
		CO 5	Familiarize the various sources of renewable energy and
			their harneshing
		CO 6	Apply the electromagnetic radiation to the
			spectroscopymethods for the analysis of
			engineering
BASIC	20ES1002	CO 1	Apply the basics of circuit analysis
ELECTRICAL		CO 2	Analyze the behaviour of magnetic circuit
CIRCUITS		CO 3	Explain the fundamentals of AC circuits
			1
		CO 4	Analyze AC circuits along with resonance and locus
			diagrams
		CO 5	Analyze an electric network using graph theory and
			different network
		CO 6	Analyze the electrical circuits using various network
			theorems
Introduction to	20ES1007	CO 1	Summarize the fundamental concepts of python
Python			programming
Programming		CO 2	Apply the basic elements and constructs the python to
			solve logical problems
		CO 3	Organize data using different data structures of python
		CO 4	Implement the files modules and packages in
			programming
		CO 5	Apply object oriented & exception handling concepts
			to build simple applications
		CO 6	Implement the concepts of Turtle Graphics.
CHEMISTRY	20CH1501	CO 1	Determine the cell constant and conductance of solutions
LAB		CO 2	Perform quantitative analysis using instrumental
(COMMON TO			methods
ECE,EEE&CS		CO 3	utilize the fundamental laboratory techniques for
E)			analyses such as titrations, separation/purification\ and
			Spectroscopy
		CO 4	analyze and gain experimental skill
BASIC	20ES1507	CO 1	Apply Practical implications of the fundamentals of
ELECTRICAL	20E31307		Kirchhoff's current and
CIRCUIT LAB			voltage Laws
CIRCUII LAB		CO 2	Familiar with basic electrical measurement instruments
			and know how to usethem to make different types of

CO 3 Practically determine band width, Q-factor and verify with theoretical values CO 4 Apply suitable theorems for circuit analysis and verify the results theoretically ENGINEERIN GGRAPHICS LAB CO 2 Draw engineering drawing CO 3 Develop the orthographic projection of points and straight lines CO 4 Construct the planes and simple solids CO 5 Understand and practice basic AUTOCAD commands CO 6 Construct Isometric views using AUTOCAD Introduction to Python Programming LAB CO 1 Understanding and use of python- Basic Concepts CO 2 Solve the concepts of python functions and data structures CO 3 Understand the concepts of files, modules, multibreading and regular expressions CO 4 Solve the concepts of class and exception handling CO 4 Solve the concepts of class and exception handling CO 5 Understand in the facilitates their ability to work collaboratively with others CO 2 Use listening skills to create more effective, less confrontational, more productive professional & personal relationships and understand techniques required for excellent telephone etiquette CO 3 Develop their public speaking abilities to speak both formally and informally CO 4 Learn the skills necessary to deliver effective presentation with clarity and impact CO 5 Understand the nuances of English language and skills required for effective participationing group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for attending an interview. PROBABILITY , STATISTICS AND NUMERICAL METHODS CO 3 Test the Large samples data by applying inferential techniques CO 3 Test the Large samples data by applying inferential techniques CO 4 Test the small samples data by applying inferential				magguraments
With theoretical values CO 4 Apply suitable theorems for circuit analysis and verify the results theoretically ENGINEERIN GRAPHICS LAB CO 1 Define the qualities of precision and accuracy in engineering drawing CO 2 Draw engineering curves with different methods CO 3 Develop the orthographic projection of points and straight lines CO 4 Construct the planes and simple solids CO 5 Understand and practice basic AUTOCAD commands CO 6 Construct Isometric views using AUTOCAD Introduction to Python Programming LAB CO 1 Understanding and use of python- Basic Concepts CO 2 Solve the concepts of python functions and data structures CO 3 Understand the concepts of files, modules, multithreading and regular expressions CO 4 Solve the concepts of class and exception handling CO 4 Solve the concepts of class and exception handling CO 5 Use listening skills to create more effective, less confrontational, more productive professional & personal relationships and understand techniques required for excellent telephone etiquette CO 3 Develop their public speaking abilities to speak both formally and informally CO 4 Learn the skills necessary to deliver effective presentation with clarity and impact CO 5 Understand the nuances of English language and skills required for effective participationin group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for attending an interview. PROBABILITY , STATISTICS AND NUMERICAL METHODS CO 1 Test the Large samples data by applying inferential techniques CO 3 Test the small samples data by applying inferential				measurements
ENGINEERIN G GRAPHICS LAB 20ES1504 CO 1 Define the qualities of precision and accuracy in engineering drawing CO 2 Draw engineering curves with different methods braight lines CO 4 Construct the planes and simple solids CO 5 Understand and practice basic AUTOCAD commands CO 6 Construct Isometric views using AUTOCAD commands CO 7 Solve the concepts of python-Basic Concepts CO 2 Solve the concepts of python functions and data structures CO 3 Understand the concepts of files, modules, multithreading and regular expressions CO 4 Solve the concepts of class and exception handling COMMUNICA TION SKILLS LAB CO 2 Use listening skills to create more effective, less confrontational, more productive professional & personal relationships and understand techniques required for excellent telephone etiquette CO 3 Develop their public speaking abilities to speak both formally and informally CO 4 Learn the skills necessary to deliver effective presentation with clarity and impact CO 5 Understand the nuances of English language and skills required for effective participationin group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for effective participationin group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for effective participationin group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for effective participationin group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for effective participationin group activities CO 6 Learn to face different types of interviews with confidence and understand the procedure & preparation required for effective p			CO 3

			transcendental equations using numerical methods and
			interpolating the polynomials
		CO 5	
			techniques to solve engineering problems
		CO 6	Solve initial value problems of ordinary differential
			equations by using numerical techniques
DATA	20ES1011	CO 1	Understand basic concepts of data structures and
STRUCTURES			algorithm analysis
		CO 2	Develop the applications using stacks and queues
		CO 3	Demonstrate the use of linked lists
		CO 4	Apply tree, graph data structures for various
			applications
		CO 5	Implement algorithms for sorting, searching, and
			hashing methods
ELECTRONIC	20ES1013	CO 1	
DEVICES AND			and special semiconductor devices
CIRCUITS		CO 2	Demonstrate the performance of rectifiers with and
			without filters Demonstrate the performance of
			rectifiers with and without filters
		CO 3	Compare the operating characteristics of BJT
		CO 4	
		CO 5	Interpret the characteristics of MOSFET.
Electrical	20EE2001	CO 1	Understand the analysis of three phase balanced and
Circuit Analysis	20222001		unbalanced circuits
		CO 2	Solve the problems in DC transient response for the
		002	given circuit
		CO 3	Solve the problems in AC transient response for the
			given circuit
		CO 4	Analyze the given network using different two port
		004	network parameters
		CO 5	
DC	20002		1 71
DC MACHINES	20EE2002	CO 1	Study construction, different phenomena like:
MACHINES		CO 2	armature reaction, commutation inDC machines.
AND		CO 2	Understand about different types of dc generators and
TRANSFORM		CO 3	significance of OCC.
ERS		003	Develop mathematical relations for torque developed by dc motor and learn aboutspeed – torque
			characteristics of different types of DC motor. Gain
			knowledge of about different testing methods of dc machines.
		CO 4	Identification of physical components of single phase
		004	transformer.
		CO 5	Learn difference between two windings and auto
			transformers.
			Identification of three phase transformers circuits.
			identification of three phase transformers eneutts.
	1		

DC MACHINES	20EE2501	CO 1	Determine the magnetization and load characteristics of a DC shunt generator
AND TRANSFORM		CO 2	Describe the efficiency and performance characteristics of DC motors
ERS Lab		CO 3	Predetermination of transformer with different loads
Electrical	20EE2502	CO 1	To design electrical systems
Circuits And Simulation Lab		CO 2	To analyze a given network by applying various Network Theorems
		CO 3	To measure three phase Active and Reactive powe
		CO 4	To understand the locus diagrams
ANALOG ELECTRONIC	20EE2003	CO 1	Demonstrate the concept of linear and non linear wave shaping circuits.
CIRCUITS		CO 2	Illustrate the concept of different types of feedback amplifiers and Oscillators.
		CO 3	Analyze various configurations of single stage and multistage amplifiers.
		CO 4	Analyze the operation and characteristics of Power Amplifiers.
		CO 5	Interpret the characteristics and applications Operational Amplifier.
ELECTROMA GNETIC FIELDS	20EE2004	CO 1	Ability to identify appropriate coordinate systems and visualize and understand the practical significance of vector calculus
FIELDS		CO 2	Understanding of the basic laws of electrostatics, Ability to compute, visualize
			electrostatic fields along with practical applications
		CO 3	Understanding of the basic laws of magnetostatics
		CO 4	Ability to compute, visualize magneto static fields along with practical applications
		CO 5	Understanding of Maxwell's equations in different forms and medium
INDUCTION MOTORS	20EE2005	CO 1	To acquire the basic knowledge of construction, working and operation of induction motor.
AND SYNCHRONO US		CO 2	Identify different speed controlling techniques of Induction motor for the given application.
MACHINES		CO 3	To impart knowledge on Construction and performance of salient and non – salient type synchronous generators and determine how several alternators running
		CO 4	in parallel share the load on the system.
		CO 4	Analyze the performance characteristics of synchronous motors.

		CO	To impart knowledge on Construction, principle of
		5	operation and performance of single phase induction
			motors and special machines.
LINEAR	20EE2006	CO 1	Determine the transfer function for the given electrical
CONTROL	20112000	COI	or mechanical systems and also determine the transfer
SYSTEMS			•
SISIEMS			function of a system using block diagram reduction
		00.2	techniques and Mason's gain formula
		CO 2	Analyze the system behaviour in time domain and step response to various dampings.
		CO 3	Determine the stability of given system by applying
		CO 3	Routh's stability criteria.
		CO 4	Analyze the stability of given system by means of
			Bode plot and polar plot
		CO 5	Determine the state model and assessment of
			controllability & observability from the given
			transfer function.
POWER	20EE2007	CO 1	Understand the working principle and operation of
GENERATION			thermal power plant.
&		CO 2	Understand the working principle and operation
TRANSMISSIO			of hydro & Nuclear power
N			plant.
		CO 3	Understand the working principle and operation of
			various Renewable energy
			sources.
		CO 4	Analyze and compute the transmission line parameters.
		CO 5	Analyze the performance of transmission Lines
ANALOG	20EE2503	CO 1	Measure various parameters of analog circuits and
ELECTRONIC			compare experimental results in the laboratory with
CIRCUITS			theoretical analysis.
AND		CO 2	Analyze negative feedback amplifier circuits,
SIMULATION			oscillators, Power amplifiers, Tuned amplifiers.
LAB		CO 3	Design analog electronic circuits using discrete
			components
		CO 4	Design RC and LC oscillators, Feedback amplifier for
			specified gain and multistage amplifiers for Low, Mid
			and high frequencies.
Digital		CO 1	Use number systems, binary codes and Boolean algebra
Electronics &			to implement digital circuits.
Logic Design		CO2	1 0
Digital		CO 2	Apply minimization techniques on Boolean expressions.
Electronics & Logic Design	20EE2008	CO 3	Design combinational circuits using logic gates.
Logic Design		CO 4	Analyze synchronous sequential circuits.
		CO 5	Classify the memories & programmable logic devices.

DOMED	20552000	00.1	
POWER	20EE2009	CO 1	Compare the advantages & disadvantages of various
DISTRIBUTIO		00.0	distributed generation.
N &		CO 2	Describe various Distributed Generation systems,
DISTRIBUTED			Micro-grid and storage devices
GENERATION		CO 3	Illustrate the Economic and control aspects of DGs
		CO 4	Analyze the different load characteristics,
			distribution factors & Modelling of
			distribution system.
		CO 5	Design of Distribution Feeders, Voltage Drop and
			power loss in D.C Distributors.
POWER	20EE2010	CO 1	Describe the operation of power semiconductor
ELECTRONIC			devices
S		CO 2	Illustrate the construction and operation of silicon
		002	controlled rectifier
		CO 3	Analyze the various uncontrolled rectifiers and design
			suitable filter circuits
		CO 4	Demonstrate the operation of the DC-DC converters
			and inverters
		CO 5	Summarise the operation of AC controllers.
Control systems	20EE2505	CO 1	Determine the transfer functions of various system
& Simulation			·
Lab		CO 2	Analyse the knowledge about the effect of poles and
			zeros location on transient and steady state behaviour
			of second order systems and can implement them to
		~~	practical systems
		CO 3	Model the systems and able to design the controllers
		00.4	and compensators
		CO 4	Get the Practical Knowledge for Time response of
		00.5	second order systems
		CO 5	Determine the performance and time domain specifications of first and second order
			_
		COC	systems Determine the stability analysis of different system by
		CO 6	using PSPICE and MATLAB
Power	20EE2506	CO 1	The student will analyze the characteristics of power
Electronics Lab			semiconductor devices & P SpiceSimulation
		CO 2	1. To Perform Laboratory Experiments practically.
		CO 3	To carry out laboratory experiments on simulation &
			Kits.
	1	1	

Electrical	20EE2011	CO 1	Describe the concepts and principles of Measuring
Measurements	_0222011		Instruments to measure voltage and current.
and		CO 2	Analyze the working principles of single and three
Instrumentatio			phase wattmeters & energy meter tomeasure power
n			and energy in circuits.
		CO 3	Demonstrate the concepts and principles of AC and
			DC bridges to evaluate resistance,
			inductance and Capacitance for AC and DC Circuits.
		CO 4	Demonstrate the operating principles of instrument
			transformers and potentiometer to
			measure unknown voltage, Current & Resistance in
			circuits.
		CO 5	Identify the physical variables to describe operating
			principle of the transducers.
MODERN	20EE2012	CO 1	Discuss the Representation of power system
POWER			matrices with formation of YBUS.
SYSTEM		CO 2	Describe the Representation of power system
ANALYSIS			matrices with formation of ZBUS.
		CO 3	Apply the concepts of algorithm for the given power
		00.4	system network.
		CO 4	Analyse the symmetrical faults and unsymmetrical faults of a power system network.
		CO 5	Develop the steady State, Dynamic and Transient
		CO 3	Stabilities for a power system.
Switch Gear &	20EE2013	CO 1	Demonstrate the operation of different types of Circuit
Protection			Breakers
		CO 2	Describe the operation & application of various types
			of protective relays.
		CO 3	Compare the different types of comparators.
		CO 4	Analyze the various protection schemes of various
			power system components likealternators,
			transformers and bus-bars.
		CO 5	Illustrate the various methods of over voltage
			protection in power systems
MEASUREME	20EE2507	CO 1	Accurately determine the values of inductance and
NT &			capacitance using a a.c bridges
INSTRUMENT		CO 2	Compute the coefficient of coupling between two
ATION LAB			coupled coils
		CO 3	Calibrate various electrical measuring instruments
201112		CO 4	Accurately determine the values of very low resistances
POWER	20EE2508	CO 1	Examine the power system analysis
SYSTEM LAB		CO 2	Identify characteristics of various Relays
		CO 3	Understand various tests on Motors and Transformers

Calid Ctata	20EE2014	CO 1	Describe the basis requirements of motor selection for
Solid State	20EE2014	CO 1	Describe the basic requirements of motor selection for
Electrical		00.2	different load profiles.
Drives		CO 2	Analyze the operation of the converter fed dc drive
		CO 3	Demonstrate the operation of the chopper fed dc drive
		CO 4	Illustrate the operation and performance of AC
			Induction motor drives
		CO 5	Analyze the induction motor drive using inverter
POWER	20EE2015	CO 1	Enumerate the Heat rate curves, Economic
SYSTEM		GO 4	operations of power systems
OPERATION		CO 2	Describe the Hydrothermal power stations Scheduling
& CONTROL		CO 3	Discuss the single area load frequency control,
			modelling of turbines, speed governing
			systems.
		CO 4	Illustrate two area load frequency control, tie line
		CO 4	and economic dispatch control for
			load frequency control.
		CO 5	Discuss the deregulation and conditions of
		COS	deregulation in a power systems.
POWER	20EE2510	CO 1	Examine the power system analysis
SYSTEM	20222310		Examine the power system that yets
SIMULATION		CO 2	Construct the controllers of a power system.
LAB		CO 3	Analyze the various power system stabilities
INDUSTRIAL	20EE4001	CO 1	Understand the electrical wiring systems for
ELECTRICAL	2022.001		residential, commercial and industrial consumers
SYSTEMS			through symbols, drawings and SLD
SISILIVIS		CO 2	Justify the need of industrial electrical system
			components and industrial automation
		CO 3	Analyze the size, rating and cost of electrical
			installations for residential and commercial
			applications
		CO 4	Analyze the appropriate electrical system with
			protective equipments for industrial
			applications
		CO 5	Understand the role of industrial automation
POWER	20EE4006	CO 1	Discuss primary components of power system
SYSTEM			planning, planning methodology foroptimum power
PLANNING			system expansion and show knowledge of
			forecasting of future load requirements of both
			demand and energy by deterministic and statistical
			techniques using forecasting tools.
			teeninques using forecasting tools.
		00.0	75
		CO 2	Discuss methods to mobilize resources to meet the

	T		
			investment requirement for the power sector and
			understand economic appraisal to allocate the
			resources efficiently and appreciate the investment
			decisions to power generation and planning for
			system energy in the country
		CO 3	Analyze the operating states of transmission system,
			their associated contingencies
			and the stability of the system and discuss principles
			of distribution planning, supply rules, network
			development and the system studies.
		CO 4	Discuss reliability criteria for generation,
		CO 4	transmission, distribution and reliability
			evaluation and analysis, grid reliability, voltage
		00.5	disturbances and their remedies
		CO 5	Discuss planning and implementation of electric –
			utility activities, market principles and the norms
			framed by CERC for online trading and exchange in
			the
			interstate power market.
Reactive Power	20EE4011	CO 1	Distinguish the importance of load compensation in
Compensation			symmetrical as well as un
and			symmetrical loads
Management		CO 2	Observe various compensation methods in
			transmission lines
		CO 3	Construct model for reactive power coordination
		CO 4	Understand the demand side reactive power
			management
		CO 5	Understand the user side reactive power management
POWER	20EE4016	CO 1	Address power quality issues to ensure meeting of
QUALITY			standards
		CO 2	Apply the concepts of compensation for sags and
			swells using voltage regulating
			devices
		CO 3	Assess harmonic distortion and its mitigation.
		CO 4	Understand the power measurement data according to
			standards
		CO 5	Analyze the power quality improvement with custom
			power devices
SMART GRID	20EE4021	CO 1	Understand technologies for smart grid
TECHNOLOGI		CO 2	Understand the smart transmission system and its
ES			technologies
		CO 3	Understand the smart distribution system and its
			technologies
		CO 4	Realize the distribution generation and smart
			consumption

		CO 5	Know the regulations and market models for smart gri
System	20EE4002	CO 1	Learn the design of Modelling of Dynamic Systems
Modelling and Identification		CO 2	Analyze the Stability margins, correlation of frequency domain and time domain
		CO 3	Analyse linear sampled data systems
		CO 4	Learn the computation Z-transform
		CO 5	Understand the compensation in Z domain and W plane
ADVANCED CONTROL	20EE4007	CO 1	Learn the design of state feedback controller and state observer
SYSTEMS		CO 2	Analyze the linear and nonlinear systems using phase plane method.
		CO 3	Analyse nonlinear systems using describing function method
		CO 4	Learn the optimal control problem
		CO 5	Understand the Solution of Kalman Filter by duality
			principle, Direct method of Lypanov forLinear and
Di ti Idi	2000 4012	00.4	Nonlinear continuous time autonomous systems.
Digital Signal	20EE4012	CO 1	Understand Discrete-time signals and systems & properties
Processing		CO 2	Analyze the z- Transform, inverse z- Transform & properties
		CO 3	Understand the design of low pass, high pass, band pass & stop band IIR digital filters
		CO 4	Learn Computer aided design of Equiripple Linear phase FIR filters
		CO 5	Understand arithmetic round off errors, Low sensitivity digital filters.
MULTIVARIA BLE	20EE4017	CO 1	Learn the Multivariable Connections, Multivariable Representation
CONTROL SYSTEMS		CO 2	Analyze the Performance Specification in Multivariable Systems.
SISIEMIS		CO 3	Analyse Stability of Multivariable Feedback
		CO 4	Learn the Controllability and Observability and Realization in Multivariable Systems
		CO 5	Understand the Multivariable Control System Design
REAL TIME CONTROL	20EE4022	CO 1	Analyze the Characteristic features of RT applications and develop features from Non - RT and Off - line system
SYSTEMS		CO 2	Understand the Hierarchical representation and analyzing Logical properties
		CO 3	Derive the Example of checking safety and timing properties and also understand the Requirements and features of real - time Computing Environments
		CO 4	Understand and analyze the Real – time Programming for real-time systems.
		CO 5	Analyze the Real - time process, Applications and understand the Distributed Real - time systems
MACHINE	20EE4003	CO 1	Understand the basic concepts of AC/ DC machine modeling.

MODELING AND		CO 2	Understand the Mathematical model of the DC Machine.
ANALYSIS		CO 3	Analyze the Reference frame theory model of Electrical machine.
		CO 4	Analyze the steady state and dynamic state
			operation of three-phase induction
			machine.
		CO 5	Analyze the modeling and simulation of three
			phase synchronous machine .
Electrical Machine Design	20EE4008	CO 1	Understand the basic principles of machine design.
Wiaciniic Design		CO 2	Analyze the performance design DC motor.
		CO 3	Analyze the performance design winding and core of transformer.
		CO 4	Analyze the performance design winding and core of rotating electrical machine.
		CO 5	Analyze the short circuit ratio and its effects on
			performance of synchronous machines.
Programmable	20EE4013	CO 1	Understand different types of PLCs
Control Devices and		CO 2	Understand the usage of Easy Veep software
Applications		CO 3	Understand the hardware details of Allen Bradley PLC.
		CO 4	Programming of PLCs .
		CO 5	Know about few applications of PLCs in different fields of Science and Technology .
HYBRID ELECTRICAL	20EE4018	CO 1	Understand the models to describe hybrid vehicles and their performance
VEHICLES		CO 2	Classify various hybrid drive-train topologies
		CO 3	Understand the various configurations of DC & AC Motor drives.
		CO 4	Understand the different possible ways of energy storage and different strategies related to Energy management strategies.
		CO 5	Understand the mode of operation and control Architecture.
AUTOMOTIVE ELECTRICAL	20EE4023	CO 1	Compute the efficiency of Batteries through various test's
ENGINEERING		CO 2	Understand the working of different starter drive units and their maintenance and the concept of vehicle charging system with its auxiliaries
		CO 3	Understand the dazzling of head light and its preventive methods
		CO 4	Understand the electronic dashboard instruments & onboard diagnostic system
		CO 5	Understand the various sensors used in Automobiles
RENEWABLE	20EE4004	CO 1	Understand various Electric Energy Conversion

ENERGY			Systems
CONVERSION SYSTEMS		CO 2	Analyze the solar thermal conversion system (Also for high temperature applications)
		CO 3	Analyze the Photovoltaic & Bio-Energy Conversion Systems
		CO 4	Illustrate the existing Wind Energy Conversion System
		CO 5	Extend the knowledge about working principle of various Fuel cell technology
Electrical	20EE4008	CO 1	Understand the basic principles of machine design.
Machine Design		CO 2	Analyze the performance design DC motor.
		CO 3	Analyze the performance design winding and core of transformer.
		CO 4	Analyze the performance design winding and core of rotating electrical machine.
SOLAR AND FUEL CELL ENERGY	20EE4009	CO 1	Understand the need of radiation of sun and discuss the various performance characteristics of solar radiation.
SYSTEMS		CO 2	Discuss the photovoltaic effect, PV Cell efficiency and its limits along with the concepts of fabrication technology for solar cell
		CO 3	Predict the performance of solar photovoltaic device and analyze its performance.
		CO 4	Carry out the application of photovoltaic system as power system.
		CO 5	Analyze the performance of fuel cells under different operating conditions and alsodefend appropriate fuel cell technology for a given application.
WIND &	20EE4014	CO 1	Understand the present wind energy scenario
BIOMASS ENERGY		CO 2	Explain the various wind energy technologies.
SYSTEM		CO 3	Identify various applications of wind energy.
WIND &		CO 4	Explain the various biomass conversion technologies
BIOMASS		CO 7	and testing of performance of biogas.
ENERGY SYSTEM		CO 5	Understand the Bio-Energy Systems with Efficient Applications.
UTILIZATION OF	20EE4019	CO 1	Utilize the suitable electric drives for different applications
ELECTRICAL		CO 2	Analyze the Speed-Time Curves of Different Services
ENERGY		CO 3	Identify the energy saving based on Illumination system (BL=3)
		CO 4	Understand the utilization of electrical energy

	1		for heating and welding
			Purposes
		CO 5	Illustrate the effective usage of solar wind
			energy for electrical applications
ENERGY	20EE4024	CO 1	Understand the importance of energy audit and the
AUDIT &			basic ideas of conduction anenergy audit
DEMAND		~ •	A 1
SIDE		CO 2	Analyze various techniques of energy management and conservation
MANAGEMEN			and conservation
T		CO 3	Understand energy efficient methods and power factor improvement techniques
		CO 4	Analyze demand side management concepts through
			case study
		CO 5	Understand various Cost effectiveness test for demand side management programs
ADVANCED	20EE4005	CO 1	Explain basic Concept of Switches and their
POWER	2022:000		controlling process
ELECTRONIC		CO 2	Demonstrate the device physics, Application and
S			Analysis of Switches in DC-DC
			converters and Single Phase Converter
		CO 3	Analyze the operation Single Phase Converter, Three
			Phase Converter, Multipulse
			Converter and Effect of Source Inductance and PWM
			Rectifiers
		CO 4	Analyze the Power Quality Improvement Techniques
		00.5	in electrical systems
		CO 5	Analyze the applications of FACTS Devices in
ADVANCED	20EE4010	CO 1	electrical system Analyze the Power electronic converters for electrical
ELECTRICAL	20EE4010	COI	drives.
DRIVES		CO 2	Analyze the field oriented control of machines.
DRIVES		CO 3	Understand the vector control of electrical drives.
		CO 4	Understand the vector control of electrical drives. Understand the sensor less control of AC drives.
		CO 5	Analyze the direct torque control of Induction
			Machines.
			1120011112001
HVDC and	20EE4015	CO 1	Find the applications of different types of HVDC
FACTS		~ -	links.
		CO 2	Apply converters for HVDC transmission for control
			of converters.

	T	00.0	TT 1 (1.1 (C.C.1)
		CO 3	Understand the concept of filters to mitigate
			harmonics, concept of reactive powerrequirements.
		CO 4	Understand the working principles of FACTS devices.
		CO 5	Analyze the performance of Series, Shunt and
		<u> </u>	combined FACTS controllers.
ADVANCED POWER	20EE4020	CO 1	Evaluate different dc-dc voltage regulators
CONVERTERS		CO 2	Analyze resonant converters
CONVERIERS		CO 3	Evaluate various multi-level inverter configurations
		CO 4	Select appropriate phase shifting converter for a multi- pulse converter
		CO 5	Analyze the various DC power supplies
ADVANCED	20EE4025	CO 1	Analyze power switching devices
POWER SEMICONDUC		CO 2	Design of current controlled devices and their
TOR DEVICES AND PROTECTION			parameters
		CO 3	Analyze the voltage controlled devices and their
			parameters
		CO 4	Understand new power semiconductor devices
		CO 5	Design of protecting circuit
